SI-37022

CONCEPT SUMMARY

The central part of Belgian Island, recently regained and defined by the Dredging and environment Centre Decapelle, is a place where the city and the river meet. Its Eclectic Urban, has a free and dynamic character, to which the Science Island Project wants to add a new monumental element.

Located at the western part of the island is undeniable, sensed and implanted [illegible] of the Scientific Park Belgium.

Formally, it is located in an advantageous position within the Belgian Island, between the Scientific Park and the Science and the Old Town, easily visible from other parts of the city (thus promoting maximum experimental-land-protection) as well as from the river and the Belgian Island Park (thus promoting maximum interaction). Into horizontally, it is linked to the Belgian Island Park and the Scientific Park.

We propose this site for the location of the MOST Belgium, because it is a place where the city and the river meet, and to the city, but it complement and linearize the composition of the Belgian Island Park, and because it is linked to the Scientific Park and complements the Belgian Island Park.

The Science Island Project is a place where the city and the river meet, creating a multifaceted and dynamic structure with a strong presence in the landscape, and a strong presence in the end of the Belgian Island. In this structure, the fabric of the Belgian Island Park is extended, and the Belgian Island is [illegible] and complemented. The Science Island Park joins the Belgian Island Park, and the Belgian Island Park joins the Scientific Park. The Scientific Park is the Belgian Island Park, which will further enrich this program composition of the MOST.

The Science Island Park is a place where the city and the river, it has related the [illegible] creating a continuous [illegible] and dynamic structure, which [illegible] possible connection of experiencing the island.
